

## PORTABLE APPARATUS FOR CARRYING A STROLLER

### ABSTRACT

An apparatus, for transporting a stroller, includes a sac for receiving a stroller therethrough. A support device is connected adjacent to the bottom end portion of the sac and selectively a frame of a stroller. The wheels of a stroller are allowed to extending outwardly from the open bottom end portion of the sac so that same can be rolled along the ground rather than carried on a user's back. A plurality of elongate straps allows the apparatus to be removably positioned on a back of a user. The apparatus may further include a plurality of adjustable clips cooperating with the plurality of straps respectively and for allowing a length thereof to be selectively adjusted. The apparatus may further include device for selectively closing the top end portion of the sac and for assisting to stabilize a stroller positioned therein.
